# Syllabus (CBCS)

# Bachelor of Science (HONOURS) Core Papers

Sr. No	Semeste	Course Code	Subject Title	Credits (T+P)
	r			
1.	I	DSC 1A ELC 101	Network Analysis and Analog Electronics	4+2
2.	II	DSC 1B ELC 102	Linear and Digital Integrated Circuits	4+2
3.	111	DSC 1C ELC 103	Communication Electronics	4+2
4.	IV	DSC 1D ELC 104	Microprocessor and Microcontrollers	4+2
5.	V	DSC 5 ELC 105	Operating system	4+2
6.		DSC 6 ELC 115	Power Electronics	4+2
7.		DSC 7 ELC 125	Transducers and Instrumentation	4+2
8.	VI	DSC 8 ELC 106	Computer Networks and Administration	4+2
9.		DSC 9 ELC 116	Biomedical and Pharmaceutical Instrumentation	4+2
10.		DSC 10 ELC 126	Embedded Systems	4+2

#### **Discipline specific courses (DSE)**

Sr.		Course Code	Subject Title	Credits
No	Semester			(T+P)
1	V(DSE 1	ELD 105	Photonics	3+1
	& DSE 2)	ELD115	Programming with MATLAB	3+1
	(Any 2 subject titles has to be offered)	ELD125	Programming with Scilab	3+1
2	VI (DSC 3)	ELD 106	Industrial Automation	3+1
	(Any one subject title has to be offered)	ELD 116	SWAYAM	Any available which makes 3+1* credit
		ELD126	VERILOG	3+1
		ELD136	FPGA Based System Design	3+1
		ELD146	Programming With Python	3+1
3	VI	ELP 106	Electronics Project	4

• One credit practical's may be designed by instructor monitoring course

#### **Skill Enhancement Courses**

Sr. No.		Course Code	Subject Title	Credits (T+P)
1		SEC 1 ELS 103	Programming in C++ (Flipped Classroom)	3+1
2	IV	SEC 2 ELS 104	Smart Phone Apps Development (Flipped Classroom)	3+1

#### **General Elective papers**

Sr. No.		Course Code	Subject Title	Credits (T)
1.	I	ELG 101	Electronics circuits and PCB designing/ consumer Electronics	3+1
2.		ELG 102/ELG112	Repair and Maintenance of Electrical and Electronic Appliances/	3+1
			Medical Home Instruments	3+1

#### **CBSC SYLLABUS FOR B.Sc. GENERAL PROGRAM**

(Numbers on right indicate number of lectures of 1-hour duration)

#### First Year B. Sc.

#### Semester I \_\_\_\_\_

#### ELECTRONICS-DSC 1A: NETWORK ANALYSIS AND ANALOG ELECTRONICS (Credits: Theory-04, Practicals-02) **Theory: 60 Lectures**

#### **Circuit Analysis:**

Concept of Voltage and Current Sources. Kirchhoff's Current Law, Kirchhoff's Voltage Law. Mesh Analysis. Node Analysis. Star and Delta networks, Star-Delta Conversion. Principal of Duality. Superposition Theorem. Thevenin's Theorem, Norton's Theorem. Reciprocity Theorem. Maximum Power Transfer Theorem. Two Port Networks: h, y and z parameters and their conversion.

#### Junction Diode and its applications:

PN junction diode (Ideal and practical)-constructions, Formation of Depletion Layer, Diode Equation and I-V characteristics. Idea of static and dynamic resistance, dc load line analysis, Quiescent (Q) point. Zener diode, Reverse saturation current, Zener and avalanche breakdown. Qualitative idea of Schottky diode. Rectifiers- Half wave rectifier, Full wave rectifiers (centre tapped and bridge), circuit diagrams, working and waveforms, ripple factor and efficiency. Filter-Shunt capacitor filter, its role in power supply, output waveform, and working, Regulation- Line and load regulation, Zener diode as voltage regulator, and explanation for load and line regulation.

#### **Bipolar Junction Transistor:**

Review of the characteristics of transistor in CE and CB configurations, Regions of operation (active, cut off and saturation), Current gains  $\alpha$  and  $\beta$ . Relations between  $\alpha$ and  $\beta$ . dc load line and Q point.

#### Amplifiers:

Transistor biasing and Stabilization circuits- Fixed Bias and Voltage Divider Bias. Thermal runaway, stability and stability factor S. Transistor as a two port network, hparameter equivalent circuit. Small signal analysis of single stage CE amplifier. Input and Output impedance, Current and Voltage gains. Class A, B and C Amplifiers.

#### Cascaded Amplifiers:

Two stage RC Coupled Amplifier and its Frequency Response.

#### Feedback in Amplifiers:

Concept of feedback, negative and positive feedback, advantages of negative feedback (Qualitative only).

#### Sinusoidal Oscillators:

## (2 Lectures)

#### (18 Lectures)

# (5 Lectures)

# 5 Lectures)

(2 Lectures)

(10 Lectures)

(14Lectures)

Barkhausen criterion for sustained oscillations. Phase shift and Colpitt's oscillator. Determination of Frequency and Condition of oscillation.

#### Unipolar Devices:

#### (4 Lectures)

JFET. Construction, working and I-V characteristics (output and transfer), Pinch off voltage. UJT, basic construction, working, equivalent circuit and I-Characteristics.

#### Reference Books:

- 1. Electric Circuits, S. A. Nasar, Schaum's outline series, Tata McGraw Hill (2004)
- 2. Electrical Circuits, M. Nahvi & J. Edminister, Schaum's Outline Series, Tata McGraw-Hill (2005)
- 3. Electrical Circuits, K.A. Smith and R.E. Alley, 2014, Cambridge University Press
- 4. Network, Lines and Fields, J.D.Ryder, Prentice Hall of India.
- 5. Electronic Devices and Circuits, David A. Bell, 5th Edition 2015, Oxford University Press.
- 6. Electronic Circuits: Discrete and Integrated, D.L. Schilling and C. Belove, Tata McGraw Hill
- 7. Electrical Circuit Analysis, Mahadevan and Chitra, PHI Learning
- 8. Microelectronic circuits, A.S. Sedra, K.C. Smith, A.N. Chandorkar, 2014, 6th Edn., Oxford University Press.
- 9. J. Millman and C. C. Halkias, Integrated Electronics, Tata McGraw Hill (2001)
- 10. J. J. Cathey, 2000 Solved Problems in Electronics, Schaum's outline Series, Tata McGraw Hill (1991)

\_\_\_\_\_

#### Laboratory experiments under DSC 1A

### At Least 15 Experiments from The Following

- 1. To familiarize with basic electronic components (R, C, L, diodes, transistors), digital Multimeter, Function Generator and Oscilloscope.
- 2. Measurement of Amplitude, Frequency & Phase difference using Oscilloscope.
- 3. Verification of (a) Thevenin's theorem and (b) Norton's theorem.
- 4. Verification of (a) Superposition Theorem and (b) Reciprocity Theorem.
- 5. Verification of the Maximum Power Transfer Theorem.
- 6. Study of the I-V Characteristics of (a) p-n junction Diode, and (b) Zener diode.
- 7. Study of (a) Half wave rectifier and (b) Full wave rectifier (FWR).
- 8. Study the effect of (a) C- filter and (b) Zener regulator on the output of FWR.
- 9. Study of the I-V Characteristics of UJT and design relaxation oscillator.
- 10. Study of the output and transfer I-V characteristics of common source JFET.
- 11. Study of Fixed Bias and Voltage divider bias configuration for CE transistor.
- 12. Design of a Single Stage CE amplifier of given gain.
- 13. Study of the RC Phase Shift Oscillator.
- 14. Study the Colpitt`s oscillator.
- 15. Construction of class A amplifier.
- 16. Construction of class B amplifier.
- 17. Construction of class C amplifier.
- 18. Study of Bridge rectifier.
- 19. Input and output characteristics of transistor in CE mode.
- 20. Use of diode as clipper.

#### **Reference Books:**

1. Electrical Circuits, M. Nahvi and J. Edminister, Schaum's Outline Series, Tata McGraw-Hill (2005)

2. Networks, Lines and Fields, J.D.Ryder, Prentice Hall of India.

3. J. Millman and C. C. Halkias, Integrated Electronics, Tata McGraw Hill (2001) Allen Mottershead, Electronic Devices and Circuits, Goodyear Publishing Corporation.

Semester II

#### ELECTRONICS-DSC 1B: LINEAR AND DIGITAL INTEGRATED CIRCUITS (Credits: Theory-04, Practicals-02) Theory: 60 Lectures

#### Operational Amplifiers (Black box approach):

Characteristics of an Ideal and Practical Operational Amplifier (IC 741), Open and closed loop configuration, Frequency Response. CMRR. Slew Rate and concept of Virtual Ground.

#### Applications of Op-Amps:

(1) Inverting and non-inverting amplifiers, (2) Summing and Difference Amplifier, (3) Differentiator, (4) Integrator, (5) Wein bridge oscillator, (6) Comparator and Zerocrossing detector, and (7) Active low pass and high pass Butterworth filter (1st order only).

#### Number System and Codes:

Decimal, Binary, Octal and Hexadecimal number systems, base conversions. Representation of signed and unsigned numbers, BCD code. Binary, octal and hexadecimal arithmetic; addition, subtraction by 2's complement method, multiplication.

#### Logic Gates and Boolean algebra:

Truth Tables of OR, AND, NOT, NOR, NAND, XOR, XNOR, Universal Gates, Basic postulates and fundamental theorems of Boolean algebra.

#### Combinational Logic Analysis and Design:

Standard representation of logic functions (SOP and POS), Minimization Techniques (Karnaugh map minimization up to 4 variables for SOP).

#### Arithmetic Circuits:

Binary Addition. Half and Full Adder. Half and Full Subtractor, 4- bit binary Adder/Subtractor.

#### Data processing circuits:

Multiplexers, De-multiplexers, Decoders, Encoders.

#### (9 Lectures)

(5 Lectures)

(12 Lectures)

#### (5 Lectures)

(4 Lectures)

#### (3 Lectures)

#### (3 Lectures)

#### Clock and Timer (IC 555):

Introduction, Block diagram of IC 555, Astable and Monostable Multivibrator circuits.

#### Sequential Circuits:

SR, D, & JK Flip-Flops. Clocked (Level and Edge Triggered)

Flip-Flops. Preset and Clear operations. Race-around conditions in JK Flip-Flop. Master-slave JK Flip-Flop.

#### Shift registers:

(2 Lectures) Serial-in-Serial-out, Serial-in-Parallel-out, Parallel-in-Serial-out and Parallel-In-Parallel-out Shift Registers (only up to 4 bits).

#### Counters (4 bits):

Ring Counter. Asynchronous counters, Decade Counter. Synchronous Counter.

#### D-A and A-D Conversion:

4 bit binary weighted and R-2R D-A converters, circuit and working. Accuracy and Resolution. A-D conversion characteristics, successive approximation ADC. (Mention of relevant ICs for all).

#### **Reference Books:**

1.OP-Amps and Linear Integrated Circuit, R. A. Gayakwad, 4th edition, 2000, Prentice Hall

2. Operational Amplifiers and Linear ICs, David A. Bell, 3rd Edition, 2011, Oxford University Press.

3. Digital Principles and Applications, A.P. Malvino, D.P.Leach and Saha, 7th Ed., 2011, Tata McGraw

4. Fundamentals of Digital Circuits, Anand Kumar, 2nd Edn, 2009, PHI Learning Pvt. Ltd.

5. Digital Circuits and systems, Venugopal, 2011, Tata McGraw Hill.

6.Digital Systems: Principles & Applications, R.J.Tocci, N.S.Widmer, 2001, PHI Learning.

7. Thomas L. Flyod, Digital Fundamentals, Pearson Education Asia (1994)

8.R. L. Tokheim, Digital Principles, Schaum's Outline Series, Tata McGraw-Hill (1994)

#### Laboratory experiments under DSC 1B

At least 05 experiments each from section A, B and C

#### Section-A: Op-Amp. Circuits (Hardware)

1. To design an inverting amplifier using Op-amp (741, 351) for dc voltage of given gain

2. (a) To design inverting amplifier using Op-amp (741,351) & study its frequency response

(b) To design non-inverting amplifier using Op-amp (741,351) & study frequency response

- 3. (a) To add two dc voltages using Op-amp in inverting and non-inverting mode
  - (b) To study the zero-crossing detector and comparator.
- 4. To design a precision Differential amplifier of given I/O specification using Op-amp.
- 5. To investigate the use of an op-amp as an Integrator.

#### (3 Lectures)

(6 Lectures)

# (4 Lectures)

(4 Lectures)

6. To investigate the use of an op-amp as a Differentiator.

7. To design a Wien bridge oscillator for given frequency using an op-amp.

8. To design a circuit to simulate the solution of simultaneous equation and 1st/2ndorder differential equation.

9. Design a Butterworth Low Pass Active Filter (1st order) & study Frequency Response

10. Design a Butterworth High Pass Active Filter (1st order) & study Frequency Response

11. Design a digital to analog converter (DAC) of given specifications.

#### Section-B: Digital circuits (Hardware)

- 1. (a) To design a combinational logic system for a specified Truth Table.
  - (b) To convert Boolean expression into logic circuit & design it using logic gate ICs.
  - (c) To minimize a given logic circuit.
- 2. Half Adder and Full Adder.
- 3. Half Subtractor and Full Subtractor.
- 4. 4-bit binary adder and adder-subtractor using Full adder IC.
- 5. To design a seven segment decoder.
- 6. To design an Astable Multivibrator of given specification using IC 555 Timer.
- 7. To design a Monostable Multivibrator of given specification using IC 555 Timer.
- 8. To build Flip-Flop (RS, Clocked RS, D-type and JK) circuits using NAND gates.
- 9. To build JK Master-slave flip-flop using Flip-Flop ICs
- 10. To build a Counter using D-type/JK Flip-Flop ICs and study timing diagram.
- 11. To make a Shift Register (serial-in and serial-out) using D-type/JK Flip-Flop ICs.

#### Section-C: SPICE/MULTISIM simulations for electronic circuits and devices

- 1. To verify the Thevenin's and Norton Theorems.
- 2. Design and analyze the series and parallel LCR circuits
- 3. Design the inverting and non-inverting amplifier using an Op-Amp of given gain
- 4. Design and Verification of op-amp as integrator and differentiator
- 5. Design the 1st order active low pass and high pass filters of given cut-off frequency
- 6. Design a Wein's Bridge oscillator of given frequency.
- 7. Design clocked SR and JK Flip-Flop's using NAND Gates
- 8. Design 4-bit asynchronous counter using Flip-Flop ICs
- 9. Design the CE amplifier of a given gain and its frequency response.

#### **Reference Books**

- 1. Digital Principles and Applications, A.P. Malvino, D.P.Leach and Saha, 7th Ed., 2011, Tata McGraw
- 2. OP-Amps and Linear Integrated Circuit, R. A. Gayakwad, 4th edn., 2000, Prentice Hall
- 3. Digital Principles, Schaum's Outline Series, Tata McGraw- Hill (1994)
- 4. Digital Electronics, S.K. Mandal, 2010, 1st edition, McGraw Hill

#### Semester III

ELECTRONICS- DSC 1C: COMMUNICATION ELECTRONICS

#### (Credits: Theory-04, Practicals-02) **Theory: 60 Lectures**

#### **Electronic communication:**

Introduction to communication – means and modes. Need for modulation. Block diagram of an electronic communication system. Brief idea of frequency allocation for radio communication system in India (TRAI). Electromagnetic communication spectrum, band designations and usage. Channels and base-band signals. Concept of Noise, signal-to-noise (S/N) ratio.

#### Analog Modulation:

Amplitude Modulation, modulation index and frequency spectrum. Generation of AM (Emitter Modulation), Amplitude Demodulation (diode detector), Concept of Single side band generation and detection. Frequency Modulation (FM) and Phase Modulation (PM), modulation index and frequency spectrum, equivalence between FM and PM, Generation of FM using VCO, FM detector (slope detector), Qualitative idea of Super heterodyne receiver

#### Analog Pulse Modulation:

Channel capacity, Sampling theorem, Basic Principles-PAM, PWM, PPM, modulation and detection technique for PAM only, Multiplexing.

#### **Digital Pulse Modulation:**

Need for digital transmission, Pulse Code Modulation, Digital Carrier Modulation Techniques, Sampling, Quantization and Encoding, Concept of Amplitude Shift Keying (ASK), Frequency Shift Keying (FSK), Phase Shift Keying (PSK), and Binary Phase Shift Keying (BPSK).

#### Introduction to Communication and Navigation systems: (10 Lectures)

Satellite Communication- Introduction, need, Geosynchronous satellite orbits, geostationary satellite advantages of geostationary satellites. Satellite visibility, transponders (C - Band), path loss, ground station, simplified block diagram of earth station. Uplink and downlink.

#### Mobile Telephony System –

Basic concept of mobile communication, frequency bands used in mobile communication, concept of cell sectoring and cell splitting, SIM number, IMEI number, need for data encryption, architecture (block diagram) of mobile communication network, idea of GSM, CDMA, TDMA and FDMA technologies, simplified block diagram of mobile phone handset, 2G, 3G and 4G concepts (qualitative only). GPS navigation system (qualitative idea only) (1 Lecture)

#### **Reference Books:**

1. Electronic Communications, D. Roddy and J. Coolen, Pearson Education India. 2.Advanced Electronics Communication Systems- Tomasi, 6th edition, Prentice Hall. 3. Modern Digital and Analog Communication Systems, B.P. Lathi, 4th Edition, 2011, Oxford University Press.

4. Electronic Communication systems, G. Kennedy, 3rd Edn., 1999, Tata McGraw Hill. 5. Principles of Electronic communication systems - Frenzel, 3rd edition, McGraw Hill

6.Communication Systems, S. Haykin, 2006, Wiley India

7. Electronic Communication system, Blake, Cengage, 5th edition.

#### (8 Lectures)

(12 Lectures)

# (10 Lectures)

(9 Lectures)

#### (10 Lectures)

8. Wireless communications, Andrea Goldsmith, 2015, Cambridge University Press

Laboratory experiments under -DSC 1C

\_\_\_\_\_

#### AT LEAST 15 experiments

- 1. Amplitude modulation and demodulation.
- 2. Frequency modulation and demodulation.
- 3. Analog multiplexer
- 4. Sample and Hold Circuit.
- 5. Study of super heterodyne radio receiver.
- 6. DSB generation using IC 1596
- 7. V-F and F -V using IC 331
- 8. Study of Antennas
- 9. Study of Varactor diode modulator
- 10. Study of PLL.
- 11. Characteristic impedance of Transmission lines.
- 12. Pre-emphasis and De-emphasis
- 13. Generation of PWM using 555 timer
- 14. Generation of PPM using 555 timer
- 15. Generation of PAM
- 16. Study of PCM generation and detection.
- 17. Study of TDM
- 18. Study of FDM
- 19. Generation of ASK
- 20. Generation of FSK
- 21. Generation of PSK
- 22. Study of DPCM modulation.
- 23. Study of Delta Modulation
- 24. Study of Modem interfacing and configuration for data communication.

#### **Reference Books:**

- 1. Electronic Communication systems, G. Kennedy, 1999, Tata McGraw Hill.
- 2. Electronic Communication system, Blake, Cengage, 5th edition.
- 3. Electronic Communication: By Dennis Roddy and John Coolen, Prentice Hall of India, New Delhi, 4th Edition, 1998.
- 4. Electronic Communications Systems, Wayne Tomasi, 5<sup>th</sup>Edition Pearson Education
- 5. Digital Communications, Simon Haykins, John Wiley, 1988
- 6. Digital Communication, John.G .Proakis, Mc Graw Hill Inc., Third edition, Malaysia,
- 7. Digital Communication Techniques, Signal Design & Detection, M.K. Simen, Prentice Hall of India, 1999

#### **Semester IV**

ELECTRONICS-DSC 1D: MICROPROCESSOR ANDMICROCONTROLLER (Credits: Theory-04, Practicals-02) Theory: 60 Lectures

#### Microcomputer Organization:

Input/ Output Devices. Data storage (idea of RAM and ROM). Computer memory. Memory organization & addressing. Memory Interfacing. Memory Map.

#### 8085 Microprocessor Architecture:

Main features of 8085. Block diagram. Pin-out diagram of 8085. Data and address buses. Registers. ALU. Stack memory. Program counter.

#### 8085 Programming:

Instruction classification, Instructions set (Data transfer including stacks. Arithmetic, logical, branch, and control instructions). Subroutines, delay loops. Timing & Control circuitry. Timing states. Instruction cycle, Timing diagram of MOV and MVI. Hardware and software interrupts.

#### 8051 microcontroller:

Introduction and block diagram of 8051 microcontrollers, architecture of 8051, overview of 8051 family, 8051 assembly language programming, Program Counter and ROM memory map, Data types and directives, Flag bits and Program Status Word (PSW) register, Jump, loop and call instructions.

#### 8051 I/O port programming:

Introduction of I/O port programming, pin out diagram of 8051 microcontrollers, I/O port pins description & their functions, I/O port programming in 8051 (using assembly language), I/O programming: Bit manipulation.

#### 8051 Programming:

8051 addressing modes and accessing memory locations using various addressing modes, assembly language instructions using each addressing mode, arithmetic and logic instructions, 8051 programming in C: for time delay & I/O operations and manipulation, for arithmetic and logic operations, for ASCII and BCD conversions.

#### Introduction to embedded system:

Embedded systems and general purpose computer systems. Architecture of embedded system. Classifications, applications and purpose of embedded systems.

#### **Reference Books:**

- 1. Microprocessor Architecture Programming & applications with 8085, 2002, R.S. Goankar, Prentice Hall.
- 2. Embedded Systems: Architecture, Programming & Design, Raj Kamal, 2008, Tata McGraw Hill
- The 8051 Microcontroller and Embedded Systems Using Assembly and C, M.A. Mazidi, J.G. Mazidi, and R.D. McKinlay, 2nd Ed., 2007, Pearson Education India.
- 4. Microprocessor and Microcontrollers, N. Senthil Kumar, 2010, Oxford University Press
- 5. 8051 microcontrollers, Satish Shah, 2010, Oxford University Press.
- 6. Embedded Systems: Design & applications, S.F. Barrett, 2008, Pearson Education India
- 7. Introduction to embedded system, K.V. Shibu, 1st edition, 2009, McGraw Hill

#### (10 Lectures)

(12 Lectures)

(5 Lectures)

(8 Lectures)

## (15 Lectures)

(5 Lectures)

#### (5 Lectures)

- 8. Embedded Microcomputer systems: Real time interfacing, J.W. Valvano 2011, Cengage Learning
- 9. Exploring C for Microcontroller, J.S. Parab etal.... Springer

#### Laboratory experiments under -DSC 1D

#### At least 7 experiments from Section-A and 8 from Section-B Section-A: Programs using 8085 Microprocessor

- 1. Addition and subtraction of numbers using direct addressing mode
- 2. Addition and subtraction of numbers using indirect addressing mode
- 3. Multiplication by repeated addition.
- 4. Division by repeated subtraction.
- 5. Handling of 16-bit Numbers.
- 6. Use of CALL and RETURN Instruction.
- 7. Block data handling.
- 8. Other programs (e.g. Parity Check, using interrupts, etc.).
- 9. Sorting
- 10. Motor control

#### Section-B: Experiments using 8051 microcontrollers:

- 1. To find that the given numbers are prime or not.
- 2. To find the factorial of a number.

3. Write a program to make the two numbers equal by increasing the smallest number and decreasing the largest number.

4. Use one of the four ports of 8051 for O/P interfaced to eight LED's. Simulate Binary counter (8 bit) on LED's.

5. Program to glow the first four LEDs then next four using TIMER application.

6. Program to rotate the contents of the accumulator first right and then left.

7. Program to run a countdown from 9-0 in the seven segment LED display.

8. To interface seven segment LED display with 8051 microcontroller and display 'HELP' in the seven segment LED display.

9. To toggle '1234' as '1324' in the seven segment LED display.

10. Interface stepper motor with 8051 and write a program to move the motor through a given angle in clock wise or counter clockwise direction.

11. Application of embedded systems: Temperature measurement & display on LCD

#### **Reference Books:**

1. Microprocessor Architecture Programming & applications with 8085, 2002, R.S.Goankar, Prentice Hall.

2. Embedded Systems: Architecture, Programming & Design, Raj Kamal, 2008, TMH 3. The 8051 Microcontroller and Embedded Systems Using Assembly and C, M.A. Mazidi, J.G. Mazidi, and R.D. McKinlay, 2nd Ed., 2007, Pearson Education India.

4. 8051 microcontrollers, Satish Shah, 2010, Oxford University Press.

5. Embedded Microcomputer systems: Real time interfacing, J.W.Valvano 2011, Cengage Learning

#### Semester V

\_\_\_\_\_

#### ELECTRONICS-DSC5: OPERATING SYSTEM

(Credits: Theory-04, Practicals-02) Theory: 60 Lectures Operating Systems Overview:

Operating System Objectives and Functions, Evolution of operating systems, major Achievements, characteristics of Modern Operating Systems, Introduction to Embedded & RTOS.

#### Processes: Process Description and Control:

Process states, Process description, Process control. **Threads, SMP and Microkernels**: Processes and Threads, Symmetric Multiprocessing, Microkernels.

#### **Concurrency: Mutual Exclusion and Synchronization**:

Principles of Concurrency, Mutual Exclusion: Software approaches, Mutual Exclusion: Hardware support, Semaphores, message passing. Concurrency: Deadlock and Starvation: Principles of Deadlock, Deadlock Prevention, Deadlock avoidance, Deadlock detection, An integrated deadlock strategy, dining philosopher's problem

#### Scheduling: Uniprocessor Scheduling:

Types of Processor Scheduling, Scheduling Algorithms. **Multiprocessor and Real Time Scheduling:** Multiprocessor Scheduling, Real Time Scheduling.

#### Embedded/ Real Time Operating systems:

Categories of Embedded Operating systems, Overview of Embedded/ Real Time Operating systems, Embedded/Real Time Operating System Concepts.

#### MicroC/OS – II, The Real Time Kernel:

Kernel Structure, Task Management

#### Textbook:

1. Operating Systems – William Stallings – Fourth Edition, Pearson Education (Chap 1 to 4) 2. Embedded / Real Time System – Dr. K.V.K.K Prasad, DreamTech Pub (Chp 5)

3. Micro/OS – II, the Real Time kernel – Jean J. Labrosse, Second Edition, CMP Books

#### Reference

1. Operating Systems Principles: Silberchatz, Galvin- Fifth Edition, Addison Wesley

# Electronics Lab DSC 5: Operating System PRACTICAL (minimum 15 practical's)

- 1. Introduction to shell commands
- 2. Shell Programming to find the largest of three numbers.
- 3. Shell Programming to sort numbers.
- 4. Shell Programming to find the factorial of a number.
- 5. Shell Programming to find the sum of the digits of a number.
- 6. Shell Programming to identify if a number is prime or composite.

(9L)

(9L)

(13L)

(8L)

(12L)

(9L)

- 7. Shell Programming to generate the prime numbers specified for a particular range.
- 8. Shell Programming to generate the Fibonacci series.
- Shell Programming to calculate the sum and average of a given numbers using for loop and while loop.
- 10. Shell Programming to find the sum of odd natural numbers.
- 11. Shell Programming to find the sum of even natural numbers.
- 12. Shell Programming demonstrating Swapping of two numbers.
- 13. Shell Programming Display of Multiplication Tables for a given range.
- 14. Shell script using grep command.
- 15. Shell script using case construct.
- 16. Shell script using to find sum of a series.
- 17. Socket Programming 13- To transmit and receive a file.
- 18. Socket Programming 14- To Transmit a message, manipulate the data by counting the number of characters in the message
- 19. RTOS-1
- 20. RTOS-2

#### **ELECTRONICS-DSC6: POWER ELECTRONICS** (Credits: Theory-04, Practicals-02) **Theory: 60 Lectures**

#### **Power Devices:**

Need for Semiconductor Power Devices, Power Diodes, Introduction to Power semiconductor devices, Types of Power electronic converters.

#### Silicon Controlled Rectifier (SCR):

Structure, Principle of operation, V-I characteristics, Two- transistor model of SCR, turn-off time, turn-on and di/ dt and dv/dt ratings, factors affecting characteristics/ratings of SCR, Turn-on Methods of SCR, Gate firing circuits: Resistive, Resistive-Capacitive, UJT firing circuit, PUT firing circuit, Synchronized UJT firing circuit, Pulse transformer firing circuit and Light Activated firing circuit, SCR as a static switch. (2L)

#### Triac:

Structure, Principle of operation, V-I characteristics, Comparison between SCR and Triac. Application of Diac and SBS as a triggering device for a Traic

#### **Protection of Power Semiconductor Devices:**

Overvoltage protection, overcurrent protection, over temperature protection, Gate protection using shielding and RF filters, Snubber circuit.

#### **Converters:**

Single Phase Half wave controlled rectifier with resistive load and inductive load (qualitative study only), Effect of freewheeling diode, Single Phase Full wave controlled rectifier: Mid-point configuration and Bridge configuration with resistive load and inductive load. Single Phase Half controlled rectifier Bridge rectifier with resistive load and inductive load, DC link variable converter, Dual Converter without circulating current, Cycloconverter, AC voltage Stabilizer.

(8L)

(3L)

(7L)

(2L)

#### **Power Transistor:**

Power BJT: Circuit diagram, Switching Characteristics and limitations Power MOSFET: Circuit diagram, Output transfer characteristics, switching characteristics and limitations, IGBT: structure with equivalent circuit, State and dynamic characteristics, Comparison between Power BJT, Power MOSFET and IGBT.

### **Power Inverter:**

Thyristor Turn- off Methods, Commutating circuits (working principle only), Introduction to Inverter, Basic circuit diagram of Voltage driven inverter, current driven inverter, sine wave inverter and square wave inverter, Thyristor Inverters: Centretapped load inverter, centre- tapped supply inverter, Bridge inverter, Current commutated bridge inverter, voltage commutated bridge inverter, McMurray inverter, McMurray- Bedford Inverter, Single Phase Pulse width Modulated inverter, Control of inverter output voltage, Current driven inverter, Series inverter: Basic series inverter (working principle only) and its drawbacks, Modified Series inverter, Uninterruptible Power Supply (UPS) : Types and Working principle(Blocks only).

#### **Batteries:**

Types of batteries used for Inverters, specification of batteries, Load calculation for batteries, connection of batteries and their Maintenance. Battery charger circuit.

#### **Choppers:**

Principle of a chopper, Step-down chopper, step-up chopper, step Up-Down chopper, Chopper classification (Type A-D), Thyristor chopper: Voltage and current commutated, Morgan Chopper, Jones Chopper. (qualitative study only)

#### **PolyPhase and Coupled Circuits:**

Poly phase system, advantages of Three Phase system, interconnection of Three Phase sources and loads, voltage Current and power in a Star and Delta connected system, Mutual inductance, characteristics of an ideal transformer and transformer losses.

#### **DC Motors:**

Basic understanding of field and armature, motor principle and motor action, Significance of the back e.m.f., torque and speed relation of a DC motor, Characteristics of DC series and DC shunt motors, Electric Braking of DC motors. Thyristor based DC motor speed control.

#### AC Motors:

Classification of AC motors, Induction Motor: General Principle, Construction, Production of rotating field: two phase supply, why does the rotor rotate, slip, frequency of rotor current, speed / torque characteristics of a AC motor, Thyristor based speed control of AC motor.

#### Laboratory experiments under -DSC6: POWER ELECTRONICS

At Least 15 Experiments from The Following

- 1. Study of I-V characteristics of a SCR
- 2. Study of I-V characteristics of a Triac
- 3. Study of I-V characteristics of a Power BJT
- 4. Study of I-V characteristics of a Power MOSFET
- 5. Study of I-V characteristics of a IGBT
- 6. Study of I-V characteristics of a Diac and SBS.
- 7. Study of Half wave controlled rectifier with resistive and inductive loads.
- 8. Study of Full wave controlled rectifier with resistive and inductive loads
- 9. Study of importance of freewheeling diode.
- 10. SCR based Power Controller using Resistive and Resistive Capacitive firing circuit.
- 11. SCR based Power Controller using UJT firing circuit.
- 12. SCR based Power Controller using PUT firing circuit
- 13. SCR based Power Controller using LASCR firing circuit
- 14. Application of thyristor as a Static switch
- 15. DC Motor control using SCR
- 16. AC motor control using SBS and Triac
- 17. Illumination control using Diac and Triac
- 18. AC voltage controller using Triac with synchronized UJT triggering.
- 19. Study of Snubber circuit
- 20. Study of forced Voltage Commutating Circuits
- 21. Study of forced Current Commutating Circuits
- 22. Study of Bridge inverter
- 23. Study of chopper circuit
- 24. Study of load calculation and connection of UPS for a given setup
- 25. Study of Stabilizer.
- 26. Study of UPS, assembling and disassembling
- 27. Construction of Transformer
- 28. Study of constructional features of DC and AC motors
- 29. Load characteristics of DC motor
- 30. Break test of induction motor.

# ELECTRONICS-DSC7: TRANSDUCER AND INSTRUMENTATION (Credits: Theory-04, Practicals-02)

#### **DIGITAL INSTRUMENTS:**

### **Theory: 60 Lectures**

#### **QUALITIES OF MEASUREMENTS:**

Performance Characteristics. Static Introduction. characteristics. Error in measurement, Types of Error, Sources of Error, Dynamic characteristics, Statistical analysis, Standard, Atomic frequency and time standards.

#### TRANSDUCERS:

Electrical transducer: Characteristics, advantages, Selecting a Transducer, **Resistive Transducer:** Potentiometer, Resistance pressure transducer, Resistive Position Transducer, Resistance thermometer. Strain Gauges: Resistance wire Gauge (Unbounded and Bonded), Foil strain Gauge, semiconductor strain Gauge. Inductive transducer: Change in self-inductance with number of turns and with change in permeability, Variable reluctance type transducer, Differential output Transducer, LVDT, Pressure inductive transducer, Capacitive Transducer (pressure), Load cell (Pressure Cell), Piezo Electric Transducer, Photoelectric transducer: Photomultiplier tube, Photocells, Photo-Voltaic cell, Semiconductor Photodiode, Phototransistor.

**Temperature Transducer:** Thermocouple, Thermistor, RTD. Magnetic flow meters.

#### SIGNAL CONDITIONING:

Introduction. Basic Instrumentation amplifier: Instrumentation amplifier. Instrumentation system, Instrumentation amplifier using Transducer Bridge. Chopped and Modulated DC Amplifier. Modulators: Synchronous Modulator and Demodulator, Solid state Modulator/Demodulator Circuit. Types of Active filters: Butterworth, Chebyschev, Bessel & Elliptic.

#### **OSCILLOSCOPE:**

Basic principle, Block diagram of oscilloscope, **Types of CRO:** Principles of Dual beam and Dual Trace Oscilloscope, Analog storage Oscilloscope, DSO, Power scope: Block diagram, principle and working, Advantages and applications, CRO specifications (bandwidth, sensitivity, and rise time).

#### BRIDGES:

DC Bridges and applications: Wheatstone, Kelvin, And AC Bridges: General form of AC bridge balance, comparison bridges, Maxwell, Hay, Schering, Wien, LCR Bridge.

#### SIGNAL GENERATOR:

A.F. Sine & Square Wave Generator, Function generator, Pulse Generator, Sweep Frequency generator.

### WAVE ANALYZERS:

Basic wave analyzer, Frequency Selective Wave Analyzer, Heterodyne Wave Analyzer. Harmonic Distortion Analyzer, Spectrum Analyzer.

## Semester VI

#### ELECTRONICS-DSC8: COMPUTER NETWORKS AND ADMINISTRATION (Credits: Theory-04, Practicals-02) **Theory: 60 Lectures**

#### Computer hardware:

Introduction to Computer components and peripherals, BIOS, PC Assembling, Formatting and Installation of Operating System. Installing Drivers, Installing Application Software, Troubleshooting.

#### PHYSICAL LAYER

Data Communications, Networks, Network types, Protocol, layering, OSI model, Layers in OSI model, TCP / IP protocol suite, Addressing, Guided and Unguided Transmission media. Switching: Centralized switching, store and forward, circuit switching, packet switching, network protocols- protocol phases, poling protocols, contention protocols

#### DATA LINK LAYER

Introduction to Data Link Layer, DLC Services, DLL protocols, HDLC, PPP, Media Access Control: Random Access, Controlled Access, Channelization. Wired LAN: Ethernet Protocol, Standard Ethernet, Fast Ethernet, Gigabit Ethernet, 10 Gigabit Ethernet.

#### Wireless LANS & Virtual Circuit Networks

Introduction, Wireless LANS: IEEE 802.11 project, Bluetooth, Zigbee, connecting devices and Virtual LANS: Connecting devices, Virtual LANS.

#### Network Layer

Network Layer Services, Packet Switching, Network layer performance, IPv4, addresses, Forwarding of IP packets, Network layer protocols: IP, ICMPv4, Mobile IP, Unicast Routing: Introduction, Routing Algorithms, Unicast Routing protocols, Multicast Routing Introduction, Next Generation IP: IPv6 Addressing, The IPv6 protocol, ICMPv6, Transition from IPv4 to IPv6.

#### **Transport Layer**

(3L) Introduction, Transport layer protocols and services, Port numbers User Datagram Protocol (UDP), Transmission Control protocol (TCP), SCTP, Quality of services: Dataflow characteristics, Flow Control.

#### **Application Layer**

Introduction, World Wide Web and HTTP, FTP, Electronic mail, Telnet, Name System (DNS), Cryptography and Network Security: Introduction, Symmetric key ciphers and Asymmetric key Ciphers, Introduction to network security.

#### Basics terms of server

Introduction to the concepts of Users, Groups and Computer management, Group policy Infrastructures and Group Policy Settings, Authentication, Domain Controllers, Sites and Replication, Domains and Forests

a sample server network.	
Introduction to server core: Installing server core, configurations of server core, configuring	(5L) roles and features
Windows server 2012 R2 Networking Enhancements	(3L)
Benefits of IPV6, networking manageability with PowerShell, mid	crosoft NIC teaming,

Installing the operating system using server manager to configure services, installing

network changes, management tools, file and print sharing, web based services

Installation and upgrading to Windows 2012 R2 server

**IP** address management (5L) IPAM: IPAM REQUIREMENTS, IPAM components, IPAM installation: installing the IPAM server feature, installing the IPAM client feature, configuring IPAM

Provisioning and server Discovery, Run Server Discoveries, Choosing Servers for management and retrieving data,

#### DNS & Name resolution in windows server 2012 R2

Installing DNS, configuring standalone DNS server, integrating with other DNS servers, implementing zones to manage namespaces, understanding record types, Managing DNS clients and name resolutions, understanding active directory's DNS, configuring DNS automatically,

#### Creating & managing user accounts

Creating local user accounts, creating domain user accounts, setting local user account properties, setting domain based user account properties.

#### Group policy

#### Group policy concepts, Group policy basics, local policies and group policy objects.

Files, folders and basic shares

Understanding the file and storage server roles, creating shares, managing permissions

#### Creating & managing shared folders:

Creating shared folders, managing permissions

#### Sharing printers on windows server 2012 R2 networks (1L)

Print services overview, installing the print and document services role

#### Laboratory experiments under: DSC8

At Least 15 Experiments from The Following

- 1. Assembling the pc
- 2. Formatting and installation of OS
- 3. Troubleshooting general system problems
- 4. study of network devices: repeater, hub, router, bridge, switch, gateway, etc.
- 5. study of IP networking and sub netting
- 6. Crimping and punching of network cables (straight and crossed)
- 7. Setting up of a network in a lab
- 8. Configuring Domain Controller
- 9. Managing users, computers and groups on a domain controller
- 10. Implementation of group policies
- 11. Configuring DNS and DHCP roles
- 12. WSUS implementation
- 13. Windows deployment
- 14. Configuring Wireless Network
- 15.simple Chat Program using TCP Sockets
- 16. Simulation of HTTP Protocol using TCP Sockets
- 17. Simulation of DNS using UDP Sockets
- 18. Learn to use commands like TCP Dump, Netstat, Trace Route
- 19. Simulation of Ping using Raw Sockets 64
- 20. Simulation of Distance Vector/Link State Routing algorithm
- 21. Study and configure functionalities of a router and switches (or by simulation)
- 22. Study of TCP/UDP performance using Simulation tool
- 23. Performance comparison of Routing protocols using Simulation tool
- 24. Simulation of error correction code (like CRC)

# ELECTRONICS-DSC9: BIOMEDICAL AND PHARMACEUTICAL INSTRUMENTATION (Credits: Theory-04, Practicals-02) Theory: 60 Lectures

#### Pharmaceutical Instrumentation:

**Ph-meter**: Analog & Digital Ph-meter, **Chromatograph**: Gas Chromatography, Liquid Chromatography, IR Spectrophotometer, Mass Spectrometer.

#### **Chemical Sensors:**

Field Effect Transducer (ISFET, IMFET), **Blood Glucose Sensor:** Glucose oxidase Enzyme, Optical Approach, **Oximeter:** Oximetry, **In-Vitro Oximetry:** Transmission Oximetry, Reflection Oximetry & In-Vivo oximetry.

#### (05L)

(06L)

#### Fundamentals of Medical Instrumentation:

Physiology system of body: Cardiovascular System, Respiratory System, Nervous system, Sources of Biomedical Signals, Basic Medical Instrumentation system, General constraints in design of medical instrumentation system.

#### **Bioelectric Signals And Electrodes:**

Origin of bioelectric potentials: Electrocardiogram, Electroencephalogram & Electromyogram, Recording Electrodes: Electrode Tissue Interface, Skin contact impedance, Electrodes for ECG, Electrodes for EEG, Electrodes for EMG, Electrical conductivity of electrodes jellies and creams, Microelectrodes: Glass micro capillary Electrode, Metal Micropipette.

#### **Physiological Transducers:**

Classification of Transducers, Performance Characteristics of Transducers: Static Characteristics and Dynamic Characteristics, Signals from Cardiovascular system, Signals from Respiratory system, Optical Fibre Sensors, Types of Optical Fibre Sensors, Various types of Transducers for biomedical Applications.

#### **Biomedical Instruments:**

**Bio-medical** recorders: Electrocardiography: Block diagram of Electrocardiography, ECG Leads, Electroencephalography: Block diagram of Electroencephalography, **Electromyography:** Block diagram of Electromyography, Measurement of Heart rate, Measurement of Pulse rate, Blood Pressure Measurement: In-direct Blood Pressure measurement: Automatic Blood Pressure Measuring using Korotkoffs Method, Oscillometric Method, Measurement of Respiration rate: Thermistor Method, Pulse Oximeter, Blood Flow meters: Electromagnetic blood flow meter, Chamber plethysmography, Cardiac Pacemaker: Asynchronous cardiac pacemaker, demand type synchronous pacemaker, An atrialsynchronous cardiac pacemaker.

#### **Biotelemetry:**

Introduction to Biotelemetry, Physiological parameters, Adaptable to Biotelemetry, The components of Biotelemetry System, Implantable Units, Applications of telemetry in-Patient care.

#### The Laser Application In Biomedical Field:

Laser: Pulse Ruby, ND-YAG, Helium-Neon, Argon, CO<sub>2</sub> LASER.

#### Non-Invasive Diagnostic Imaging:

Study of block diagrams of X-Ray, Study of block diagrams of CT, Study of block diagrams of Nuclear Medical Imaging, Study of block diagrams of Magnetic Resonance Imaging, Study of block diagrams of Ultrasonic Imaging.

### ELECTRONICS-DSC10: EMBEDDED SYSTEMS

#### (Credits: Theory-04, Practicals-02) Theory: 60 Lectures UNIT 1:

Introduction of Microcontroller / Microprocessor architectures, The Texas Instrument's MSP430 Microcontrollers, Architecture: CPU, Memory Structure, RAM and Information memory, Variants and their hardware enhancements.

#### UNIT 2:

Resets and Interrupts: Resets, Interrupts and its uses, interrupt v/s Polling Clocks and Timers: Sources, Controls Low power design: Power Consumption characteristics, Low Power modes Addressing modes: Register mode, Immediate mode, Symbolic mode, Absolute mode, Indexed mode, Indirect mode/ Indirect Autoincrement mode.

#### UNIT 3:

Instruction set of MSP430: Basic Instruction set, Instruction format, I/O Port programming, Arithmetic & Logical Instructions.

#### UNIT 4:

Real time interfacing I: 16x2 Alphanumeric LCD, 4 x 1 / 4x4 keypad, 7segment LED, RTC

Real time Interfacing II (Mixed signal interfaces): 10bit /12-bit SAR A/D converter, 12-bit D/A Converter

Real time interfaces III (Communication of data): UART, I2C, SPI

#### **Reference Books:**

- 1. Embedded Systems Design using the TI MSP430 Series Author: Chris Nagy Imprint Newness
- 2. MSP430 Microcontroller Basics Author: John Davies Imprint: Newness
- 3. User data manuals and Handbooks of TI MSP430

#### Laboratory experiments under –DSC10: EMBEDDED SYSTEMS

At Least 15 Experiments from The Following Examples in Assembly & C in workable on IAR WORKBENCH

#### EMBEDDED SYSTEMS- LAB

- 1. Lab-1 (4 experiments)
  - **Basic Instruction set** 
    - i. I/O Port programming
    - ii. Addressing modes
    - iii. Arithmetic & Logical Instructions
    - iv. RAM and Information memory

#### (10L)

(10L)

#### (25 L)

(15 L)

- 2. Lab-2 (2 – experiments) Timers of MSP430
- 3. Lab-3 (2 – experiments) Interrupts
- 4. Lab-4 (7 – experiments)
  - Real time interfacing (I)
    - i. 16x2 Alphanumeric LCD
    - ii. 4 x 1 keypad
    - iii. 4 x 4 keypad
    - iv. 7segment LED
    - v. RTC
    - vi. Interfacing DC motor
    - vii. Interfacing STEPPER motor
- 5. Lab-5 (3 - experiments)

Real time Interfacing – (II) Mixed signal interfaces

- i. 12bit A/D converter
- ii. 16bit Sigma Delta A/D converter
- iii. 12-bit D/A Converter
- 6. Lab-6 (3 - experiments)

Real time Interfacing - (III) Serial communication interfaces

- i. UART
- ii. I2C
- iii. SPI

Practical's in Assembly/C workable on IAR WORKBENCH

#### ELECTRONICS-DSE 1 or 2: PHOTONICS (ELD 115)

#### (Credits: Theory-03, Practicals-01) Theory Lectures 45

Unit-1

(20 Lectures) Light as an Electromagnetic Wave: Plane waves in homogeneous media, concept of spherical waves. Reflection and transmission at an interface, total internal reflection, Brewster's Law. Interaction of electromagnetic waves with dielectrics: origin of refractive index, dispersion.

**Interference:** Superposition of waves of same frequency, Concept of coherence, Interference by division of wave front, Young's double slit, Division of Amplitude, thin film interference, Newton's rings; Michelson interferometer.

Diffraction: Huygens Fresnel Principle, Diffraction Integral, Fresnel & Fraunhoffer approximations. Fraunhoffer Diffraction by a single slit, rectangular aperture, double slit, resolving power of microscopes and telescopes; Diffraction grating: Resolving power and Dispersive power

#### Unit-2

(12 Lectures) Polarization: Linear, circular and elliptical polarization, polarizer-analyzer and Malus' law; Double refraction by crystals, Interference of polarized light, Wave propagation in uniaxial media. Half wave and guarter wave plates.

#### Unit-3

(13 Lectures)

Light Emitting Diodes: Construction, materials and operation.

Lasers: Interaction of radiation and matter, Einstein coefficients, Condition for amplification, laser cavity, threshold for laser oscillation, line shape function. Examples of common lasers. The semiconductor injection laser diode.

Photodetectors: Bolometer, Photomultiplier tube, Charge Coupled Device. Photo transistors and Photodiodes (p-i-n, avalanche), quantum efficiency and responsively.

**LCD Displays:** Types of liquid crystals, Principle of Liquid Crystal Displays, applications, advantages over LED displays.

#### **Reference Books:**

1. Ajoy Ghatak, Optics, Tata McGraw Hill, New Delhi (2005)

2. E. Hecht, Optics, Pearson Education Ltd. (2002)

3. J. Wilson and J. F. B. Hawkes, Optoelectronics: An Introduction, Prentice Hall India (1996)

4. S. O. Kasap, Optoelectronics and Photonics: Principles and Practices, Pearson Education (2009)

5. Ghatak A.K. and Thyagarajan K., "Introduction to fiber optics," Cambridge Univ. Press. (1998)

#### Laboratory experiments under: DSE 1 or 2: PHOTONICS At least 8 experiments from following list

- 1. To verify the law of Malus for plane polarized light.
- 2. To determine wavelength of sodium light using Michelson's Interferometer.
- 3. To determine wavelength of sodium light using Newton's Rings.
- 4. To determine the resolving power and Dispersive power of Diffraction Grating.
- 5. Diffraction experiments using a laser.
- 6. Study of Faraday rotation.
- 7. To determine the specific rotation of scan sugar using polarimeter.
- 8. To determine characteristics of LEDs (Radiation pattern, Power Vs. Current)
- 9. To measure the numerical aperture of an optical fiber.
- 10. Design of Photo detector circuit using OP-amp
- 11. Design of digital optical receiver using comparator

12. To determine characteristics Photo- detector (rise time, radiation pattern, Power Vs. Current)

13. Light coupling in optical fiber, Numerical aperture of Fiber

#### **Reference Books:**

1. J. Wilson and J. F. B. Hawkes, Optoelectronics: An Introduction, Prentice Hall India

#### (1996)

2. S. O. Kasap, Optoelectronics and Photonics: Principles and Practices, Pearson Education (2009)

3. Ghatak A.K. and Thyagarajan K., "Introduction to fiber optics," Cambridge Univ. Press. (1998)

DSE 1 or 2: PROGRAMMING WITH MATLAB (ELD 115) (Credits: Theory-03, Practicals-01) **Total Lectures: 45 CHAPTER 1: STARTING WITH MATLAB** 

(6L) Starting MATLAB, MATLAB Windows, working in the Command Window, And Arithmetic Operations with Scalars: Order of Precedence & Using MATLAB as a Calculator, Display Formats, Elementary Math Built-In Functions, Defining Scalar Variables: The Assignment Operator, Rules About Variable Names, Predefined Variables.

#### **CHAPTER 2: CREATING ARRAYS**

Creating a one-dimensional array (vector), Creating a two-dimensional array (matrix): The zeros, ones and eye Commands, Notes about variables in MATLAB, The transpose operator, Array addressing: vector & matrix, Using a colon: in addressing arrays, Adding elements to existing variables Deleting elements, Built-in functions for handling arrays, Strings and strings as variables.

#### **CHAPTER 3: MATHEMATICAL OPERATIONS WITH ARRAYS**

Addition and subtraction, Array multiplication, Array division, Element-by-element operations, using arrays in MATLAB built-in math functions, Built-in functions for analyzing arrays, Generation of Random Numbers

#### **CHAPTER 4: SCRIPT FILES**

Notes about Script Files, Creating and Saving a Script File, running a script file: Current directory & Search path, Global variables, Input to a script file, Output commands: The disp Command & The fprintf command.

#### **CHAPTER 5: TWO-DIMENSIONAL PLOTS**

The Plot Command: Plot of Given Data & Plot of a Function, the fplot command, Plotting Multiple Graphs in The Same Plot: Using the plot Command & Using the hold on, hold off Commands Using the line Command, Formatting A Plot: Formatting a Plot Using Commands & Formatting a Plot Using the Plot Editor, Histograms.

#### **CHAPTER 6: FUNCTIONS AND FUNCTION FILES**

Creating a function file, Structure of a function file: Function Definition Line, Input and Output Arguments, The H1 Line and Help Text Lines, Function Body, Local and global variables, saving a function file, Using a function file, Examples of simple function files, Comparison between script files and function files

#### (8L)

#### (6L)

# (7L)

# (5L)

#### (5L)

#### CHAPTER 7: PROGRAMMING IN MATLAB

#### (8L)

Relational and logical operators, **conditional statements:** The if-end Structure, the if-elseend Structure, the if-elseif-else-end Structure, the switch-case statement, loops: for-end loops, while-end loops, Nested loops and nested conditional statements, the break and continue commands.

#### Reference Books:

- 1. MATLAB: An Introduction with Applications, by Amos Gilat, 2nd edition, Wiley, 2004,
- 2. C.B. Moler, Numerical Computing with MATLAB, SIAM, 2004.

#### Laboratory experiments under DSE 1 OR 2: AT LEAST 8 EXPERIMENTS FROM FOLLOWING.

- 1. Write a program to perform simple Calculations using MATLAB.
- 2. Write a program to perform Elementary math functions and Trigonometric math functions using MATLAB.
- 3. Write a program to assign the following expressions to a variable A and then to print out the value of A.
  - a. (3+4)/(5+6)
  - b.  $2\pi^2$
  - c.  $\sqrt{2}$
  - d.  $(0.0000123 + 5.67 \times 10^{-3}) \times 0.4567 \times 10^{-4}$
- 4. Write a program to convert Celsius temperatures to Fahrenheit by multiplying by 9, dividing by 5, and adding 32. Assign a variable called C the value 37, and implement this formula to assign a variable F the Fahrenheit equivalent of 37 Celsius.
- 5. Write a program to perform Matrix addition, subtraction and Multiplication for [3x 3] matrix.
- 6. Write a program to use the built in functions for analysing array.
- 7. Write a program to plot a graph for the given data.
- 8. Write a program to plot a graph using flpot command.
- 9. Write a program to plot a multiple graph using plot command.
- 10. Write a program to check whether the input number is even or odd.
- 11. Write a program to compare three numbers and print the largest one.
- 12. Write a program to print factors of a given number.
- 13. Write a program to display the first n terms of Fibonacci series.
- 14. Write a program to find factorial of the given number.
- 15. Write a function called F to C (ftoc.m) to convert Fahrenheit temperatures into Celsius. Make sure the program has a title comment and a help page. Test from the command window with:
  - i. F to C (96)
  - ii. look for Fahrenheit
  - iii. help F to C
- 16. Write a program using if-end Structure, if-else-end Structure, if-elseif-else-end Structure.
- 17. Write a program using switch-case statement.
- 18. Write a program using for-end loops and while-end loops
- 19. Write a program using Nested loops and nested conditional statements.

DSE 1 or 2: PROGRAMMING WITH SCILAB (ELD 125) (Credits: Theory-03, Practicals-01) Theory: 45 Lectures	
<b>Unit I- Introduction to Scilab:</b> Why Scilab, Installing Scilab, Getting Started with Scilab: SCILAB Environment Workspace, Working Directory, Expressions, Constants, Variables and ass statement, Arrays.	(10 L) , signment
Unit II- Graph Plots: Basic plotting, built in functions, generating waveforms, Sound replay, load	(8L) and save.
<b>Unit III: Matrix Operation</b> Matrices and Some Simple Matrix Operations, Sub- Matrices.	(6L)
Unit IV- Procedures and Functions: Arguments and return values.	(6L)
Unit V-Control Statements: Conditional statements: If, Else, Else-if, Repetition statements: While, for le	(10L) oop.
<b>Unit VI</b> Introduction to xcos, Calling User Defined Functions in XCOS	(5L)
<ul> <li>Reference Books:</li> <li>1. M.Affouf, SCILAB by Example, Create Space Independent Publishin Platform,2012</li> <li>2. H. Ramchandran, A.S. Nair, SCILAB, S. Chand, 2011</li> </ul>	ng
Laboratory experiments under DSE 1 OR 2: AT LEAST 8 EXPERIMENTS FROM FOLLOWING.	
<ol> <li>Write a program to perform simple Calculations using Scilab.</li> <li>Write a program to perform Elementary math functions and Trigonor functions using Scilab.</li> </ol>	metric math

- 3. Write a program to assign the following expressions to a variable A and then to print out the value of A.
  - a. (3+4)/(5+6)
  - b.  $2\pi^2$
  - c.  $\sqrt{2}$
  - d.  $(0.0000123 + 5.67 \times 10^{-3}) \times 0.4567 \times 10^{-4}$
- 4. Write a program to convert Celsius temperatures to Fahrenheit by multiplying by 9, dividing by 5, and adding 32. Assign a variable called C the value 37, and implement this formula to assign a variable F the Fahrenheit equivalent of 37 Celsius.
- 5. Write a program to perform Matrix addition, subtraction and Multiplication for [3x 3] matrix.
- 6. Write a program to use the built in functions for analysing array.
- 7. Write a program to plot a graph for the given data.
- 8. Write a program to plot a graph using flpot command.
- 9. Write a program to plot a multiple graph using plot command.

- 10. Write a program to check whether the input number is even or odd.
- 11. Write a program to compare three numbers and print the largest one.
- 12. Write a program to print factors of a given number.
- 13. Write a program to display the first n terms of Fibonacci series.
- 14. Write a program to find factorial of the given number.
- 15. Write a function called FtoC (ftoc.m) to convert Fahrenheit temperatures into Celsius. Make sure the program has a title comment and a help page. Test from the command window with:
  - iv. FtoC(96)
  - v. look for Fahrenheit
  - vi. help FtoC
- 16. Write a program using if-end Structure, if-else-end Structure, if-elseif-else-end Structure.
- 17. Write a program using switch-case statement.
- 18. Write a program using for-end loops and while-end loops
- 19. Write a program using Nested loops and nested conditional statements.

#### ELECTRONICS-DSE 3: INDUSTRIAL AUTOMATION (ELD 116) (Credits: Theory-03, Practicals-01) Theory: 45 Lectures

#### Unit 1

#### (12 Lectures)

Introduction to control systems; types of control systems, basic concept of open-loop and closed-loop control systems; Mathematical modelling and representation of mechanical (translational & rotational) and electrical systems Conversion of mechanical to analogous electrical systems (force-voltage and force current analogy); (Block diagrams, Signal flow graphs and transfer functions.

#### Unit 2

#### (13 Lectures)

Programmable Logic Controllers (PLC): PLC Advantages & Disadvantages, Overall PLC System, CPU, PLC input & Output Modules (Interfaces), General PLC Programming Procedure: Proper Construction of PLC Ladder diagrams, Process Scanning considerations, Devices to which PLC input & output are connected: Input ON/OFF switching devices, input analog devices, ON/OFF devices, Output analog devices, Basic PLC Programming: (i) Programming ON-OFF inputs to produce ON-OFF outputs: PLC input instructions, Outputs Coils, Indicators, Operational Procedures, Constant Coil input & output programming examples, Fail Safe circuits, Industrial Process Example. (ii) Relation of digital gate Logic to Contact /Coil Logic: Digital logic gates & PLC equivalents, Boolean Algebra PLC programming, Conversion Examples. (iii) Creating Ladder Diagrams from Process Control Descriptions: Ladder diagrams & Sequence listing, Large Process Ladder diagram construction. (iv) PLC Timer Functions: PLC timer functions, Examples of timer and their industrial applications, Industrial process timing applications. (v) PLC Counter functions: PLC counters, Examples of Counter Functions, Industrial applications. (vi) Selecting a PLC: PLC versus Personal Computer, Factors to consider while selecting a PLC.

#### Unit 3

#### (20 Lectures)

Supervisory Control and Data acquisition (SCADA) Systems, Types of supervisory systems, concepts of Distributed Digital Control Systems (DCS), Direct digital control (DDC), SCADA: Components of SCADA Systems, field data interface devices, communication network and other details, System Architecture: monolithic,

distributed, networked, SCADA protocols in short, application of SCADA in industry; installation of SCADA Systems; security and weakness of SCADA Systems.

8. Modern Control Engineering—D. Roy Choudhry

9. Modern Control Engineering, -K.Ogala, PHI

10. Control Systems, -A.NagoorKani, RBA Publications, Chennai

11. Automatic Control Systems, - B.C.Kuo, PHI

12.Programmable Logic Controllers Principles and applications by John W. Webb and Ronald A. Reis 5<sup>th</sup>edition prentice Hall of India.

13. Programmable Logic Controllers and Industrial Automation by Madhuchhanda, Samarjit Sengupta Penram International Pub. Pvt. Ltd.

14.Programmable Logic Controllers Programming methods and applications by john r. Hackworth and Frederick D. Hackworth, Jr. Pearson education.

15. Programmable Logic Controllers by Frank Petuzella, Tata McGraw Hill Pub.

# Laboratory experiments under -DSE 3: INDUSTRIAL AUTOMATION (minimum 8 practicals', 4 from PLC and 4 from SCADA)

PLC PRACTICALS:

1. Interfacing of field devices to plc, viz, sensor, relays, push buttons and understanding of source and sink concept.

- 2. Use of "no" and "nc" contacts for writing effective "start" and "stop" circuit.
- 3. Use of ladder diagram to understand normally close contact as "fail safe Contact".
- 4. Concept of interlocking for safe machine operation.
- 5. Importance of latch, jog / inching.

6. Understanding three basic timers: on delay, off delay and retentive. (using timer based applications)

7. Understanding two counters up and down (using counter based applications)

- 8. Understanding pwm using plc
- 9. Understanding pid using plc
- 10. PLC ladder Program for logic functions: AND, OR, NAND, NOR and XOR.
- 11. PLC ladder Program to prove De Morgan's theorem.
- 12. PLC ladder program for Multiple inputs and outputs.
- 13. PLC ladder Program for latching and unlatching functions.
- 14.PLC ladder Program using timers.

15.PLC ladder Program using counters.

16.PLC ladder Program to apply timer functions to process control.

17.PLC ladder Program to apply timer functions for control of industrial control.

18.PLC ladder Program to apply counter functions to process control.

19.PLC ladder Program to apply timer and counter functions to process control

20.PLC ladder Program using Master Control Relay function

21.PLC based application program for automatic indication for water tank level.

22.PLC based application program for traffic light indication.

23.PLC based application program forward and Rev direction of Motor.

24.PLC based application program for controlling Robot.

25.PLC based application program for ON/OFF control lights.

26.Interfacing Digital input and output device/s to PLC and writing a ladder program.

27. Interfacing Analog input and output device/s to PLC and writing a ladder program.

#### SCADA PRACTICALS:

- 1. Use of slider as tag and different tag generation.
- 2. Creating simple start stop logic using a script.
- 3. Creating mimic for bottle filling plant.
- 4. Password setting and security in scada.
- 5. Use of real time and historical trend for real time application.
- 6. Acquiring plc data through communication.
- 7. Controlling plc output through scada to run ac induction motor.
- 8. Creating and understanding alarms.

-----

#### DSE 3(SWAYAM) SEC COURSES ELECTRONICS SEC 1: PROGRAMMING in C++ (Credits: Theory-03, Practicals-01) Theory Lectures: 45 lectures

Chapter 1: Flowcharts and Algorithms	(1L)

#### Chapter 2: Data types, Operators and expressions

Identifiers, keywords, constants, C++ operators, Type conversion

#### Chapter 3: Writing a program in C++

Declaration of variables, statements, and control statements – if statement and if – else statements, switch statements, loop statements: for loop, while loop and do-while loop, breaking control statements: break and continue statements, goto statement.

(3L)

(3L)

(4L)

#### Chapter 4: Functions and Program Structures

Defining a function, return statement, types of functions, Actual and formal arguments, Local and Global arguments, Default arguments, Multifunction program, Storage class specifiers, Recursive functions, Pre-processors, Macro, header files and standard files.

### Chapter 5: Arrays

Array notation, array declaration, array initialization, processing with an array, arrays and functions, Multidimensional arrays, Character arrays.

#### **Chapter 6: Pointers**

Pointer declaration, address operator, pointer variable, pointer expressions, pointer arithmetic, pointer and functions, pointers and arrays, pointers and strings, array of pointers and pointer to pointer.

#### **Chapter 7: Structures**

#### Structure declaration, structure definition, and structure initialization, accessing structure members, nesting of structures, array of structures, structures and functions

#### **Chapter 8: Classes and Objects**

Declaration of a class, member functions, defining the object of a class, accessing a member of a class, Array of class objects, Pointers and classes, classes within classes.

#### **Chapter 9: Constructors and destructors**

Constructors, Copy constructors, Parameterized constructors, multiple constructors, default constructors, destructors, inline member functions, Static class members (Static data members and static member functions), friend function, new and delete operators, this operator.

#### **Chapter 10: Inheritance**

#### Types of Inheritances, Types of base classes, derived class, types of inheritance.

### Chapter 11: Operator overloading

Defining operator overloading, overloading unary operators, overloading binary operators.

### Chapter 12: Polymorphism

Function overloading, early binding, Late binding, virtual functions, Pure virtual functions and Abstract base classes.

#### Text Book:

1. Object oriented programming with C++ E. Balaguruswamy TMH **REFERENCE BOOKS:** 

1. Mastering C++ K. R. Venugopal, Rajkumar, T. Ravishankar TMH

2. Programming with C++ D. Ravichandran TMH

#### Laboratory experiments under SEC1: Programming in C++ AT LEAST 8 EXPERIMENTS FROM FOLLOWING.

### **Practical List**

- 1. To find the largest of three numbers.
- 2. Sum and average of n numbers.
- 3. Sum of the digits of a number using mod function.
- 4. Generation of Fibonacci series using functions and classes
- 5. Prime numbers

#### (3L)

## (3L)

(3L)

(5L)

(5L)

# (5L)

# (5L)

### (5L)

- a) To identify whether a number is prime or composite.
- b) To print prime numbers for a given range of numbers.
- 6. Sine series evaluation.
- 7. Sorting of n numbers using arrays
- 8. Programming using overloading
- 9. Programming using polymorphism
- 10. Programming using inheritance
- 11. Matrix multiplication
- 12. Addition of a number using Storage class specifiers
- 13. Factorial of a number using recursive functions
- 14. Swapping of a number using:
  - a) Call by value
  - b) Call by reference
- 15. Programming using class constructors and destructors
- 16. Programming to generate student identity cards using structures
- 17. Copy contents of two strings A and B into string C and count the number of characters present in string C.

#### **Reference Books:**

- 1. Yeshvant Kanetkar, Let Us C, BPB Publications
- 2. Numerical methods for Engineers, Steven C. Chapra and Raymond P. Canale, 6<sup>th</sup> Edition, TMH.
- 3. Programming in ANSI C, Balaguruswamy, 2nd edition, TMH.

#### ELECTRONICS-SEC2: SMART PHONE APPS DEVELOPMENT (Credits: 03, Practicals-01) Theory Lectures: 45 lectures

#### UNIT-I

Introduction:

What is mobile Application Programming, Different Platforms, Architecture and working of Android, iOS and Windows phone 8operating system, Comparison of Android, iOS and Windows phone 8.

#### Android Development Environment:

What is Android, Advantages and Future of Android, Tools and about Android SDK, Installing Java, Eclipse, and Android, Android Software Development Kit for Eclipse, Android Development Tool: Android Tools for Eclipse, AVDs: Smartphone Emulators, Image Editing,

#### Android Software Development Platform:

Understanding Java SE and the Dalvik Virtual Machine, Directory Structure of an Android Project, Common Default Resources Folders, The Values Folder, Leveraging Android XML, Screen Sizes, Launching Your Application: The AndroidManifest.xml File, Creating Your First Android Application.

#### UNIT-II

(20L)

#### Android Framework Overview:

(15L)

The Foundation of OOP, The APK File, Android Application Components, Android Activities: Defining the User Interface, Android Services: Processing in the Background, Broadcast Receivers: Announcements and Notifications, Content Providers: Data Management, Android Intent Objects: Messaging for Components, Android Manifest XML: Declaring Your Components.

Views and Layouts, Buttons, Menus, and Dialogs, Graphics Resources in Android: Introducing the Drawables, Implementing Images, Core Drawable Subclasses, Using Bitmap, PNG, JPEG and GIF Images in Android, Creating Animation in Android

**Handling User Interface(UI) Events:** An Overview of UI Events in Android, Listening for And Handling Events, Handling UI Events via the View Class, Event Call-back Methods, Handling Click Events, Touchscreen Events, Keyboard Events, Context Menus, Controlling the Focus.

#### UNIT-III

(10L)

**Content Providers:** An Overview of Android Content Providers, Defining a Content Provider, Working with a Database.

**Intents and Intent Filters:** Intent, Implicit Intents and Explicit Intents, Intents with Activities, Intents with Broadcast Receivers

Advanced Android: New Features in Android 4.4.

**iOS Development Environment:** Overview of iOS, iOS Layers, Introduction to iOS application development.

**Windows phone Environment:** Overview of windows phone and its platform, Building windows phone application.

#### **Suggested Books:**

- 1. Beginning Android 4, OnurCinar, Apress Publication
- 2. Professional Android 4 Application Development, Reto Meier, Wrox

#### Electronics Lab SEC2: SMART PHONE APPS DEVELOPMENT

#### PRACTICALS: (ANY 8)

- 1. Create —Hello Worldl application. That will display —Hello Worldl in the middle of the screen in the emulator. Also display —Hello Worldl in the middle of the screen in the Android Phone.
- 2. Create- HELLO INDIA, when the button is clicked.
- 3. Create 4 buttons which displays four values.
- 4. Create an application with login module. (Check username and password).
- 5. Create spinner with strings taken from resource folder (res >> value folder) and on changing the spinner value, Image will change.
- 6. Create a menu with 5 options and and selected option should appear in text box.
- 7. Create a list of all courses in your college and on selecting a particular course teacher-in-charge of that course should appear at the bottom of the screen.
- 8. Create an application with three option buttons, on selecting a button color of the screen will change.
- 9. Create and Login application as above. On successful login, pop up the message.

#### **GE Courses**

#### GE 1: ELECTRONICS CIRCUITS AND PCB DESIGNING/ Consumer Electronics

#### (Credits: Theory-03, Practical: 01) **Theory: 45 Lectures**

#### Unit-1

(9 Lectures)

Network theorems (DC analysis only): Review of Ohms law, Kirchhoff's laws, voltage divider and current divider theorems, open and short circuits.

Thevenin's theorem. Norton's theorem and interconversion, superposition theorem. Maximum power transfer theorem.

#### Unit 2

(11 Lectures) Semiconductor Diode and its applications: PN junction diode and characteristics, ideal diode and diode approximations. Block diagram of a Regulated Power Supply, Rectifiers: HWR, FWR- center tapped and bridge FWRs. Circuit diagrams, working and waveforms, Ripple factor & efficiency (no derivations). Filters: circuit diagram and explanation of shunt Capacitor filters with waveforms.

Zener diode regulator: circuit diagram and explanation for load and line regulation, Disadvantages of Zener diode regulator.

#### Unit-3

(13 Lectures)

BJT and Small Signal amplifier: Bipolar Junction Transistor: Construction, principle & working of NPN transistor, terminology. Configuration: CE, CB, CC. Definition of  $\alpha$ ,  $\beta$  and y and their interrelations, leakage currents. Study of CE Characteristics, Hybrid parameters. Transistor biasing: need for biasing, DC load line, operating point, thermal runaway, stability and stability factor.

Voltage divider bias: circuit diagrams and their working, Q point expressions for voltage divider biasing. Small signal CE amplifier: circuit, working, frequency response, re model for CE Configuration, derivation for Av, Zen and Zout.

#### Unit-4

(12 Lectures) Types of PCB: Single sided board, double sided, Multilayer boards, Plated through holes technology, Benefits of Surface Mount Technology (SMT), Limitation of SMT, Surface Mount components: Resistors, Capacitor, Inductor, Diode and IC's.

Layout and Artwork: Layout Planning: General rules of Layout, Resistance, and Capacitance and Inductance, Conductor Spacing, Supply and Ground Conductors, Component Placing and mounting, Cooling requirement and package density, Layout check. Basic artwork approaches, Artwork taping guidelines, General artwork rules: Artwork check and Inspection.

Laminates and Photo printing: Properties of laminates, Types of Laminates, Manual cleaning process, Basic printing process for double sided PCB's, Photo resists, wet film resists, Coating process for wet film resists, Exposure and further process for wet film resists, Dry film resists

Etching and Soldering: Introduction, Etching machine, Etchant system. Principles of Solder connection, Solder joints, Solder alloys, Soldering fluxes. Soldering, Disordering tools and Techniques.

#### **Reference Books:**

1. Electronic Devices and circuit theory, Robert Boylstead and Louis Nashelsky, 9th Edition, 2013, PHI

2. Electronics text lab manual, Paul B. Zbar.

3. Electric circuits, JoesephEdminister, Schaum series.

4. Basic Electronics and Linear circuits, N.N. Bhargava, D.C. Kulshresta and D.C Gupta -TMH.

5. Electronic devices, David A Bell, Reston Publishing Company/DB Tarapurwala Publ.

6. Walter C.Bosshart "PCB DESIGN AND TECHNOLOGY" Tata McGraw Hill Publications, Delhi. 1983

7. Clyde F.Coombs "Printed circuits Handbook" III Edition, McGraw Hill.

# LAB GE1: Electronics circuits and PCB designing Practical's: (Any 8)

- 1. Familiarization with various controls and use of CRO, Power Supply, Function Generator and Multimeter.
- 2. Verification of Ohm's Law and Kirchhoff's Laws.
- 3. Verification of voltage division and current division Laws.
- Familiarization of various Electronics components & Introduction to Bread board, Resistors (Colour codes) and values, Capacitors (various types), Inductors (various types), Diodes – Rectifier, Zener, LED, BJT
- 5. Verification of Thevenin's Theorem.
- 6. Verification of Norton's Theorem.
- 7. Verification of Superposition Theorem.
- 8. Verification of Maximum Power Transfer Theorem.
- 9. Characteristics of P-N junction diode.
- 10. Study of H.W. and F.W. Rectifiers (Ripple factor and wave forms).
- 11. Study of Bridge Rectifiers (Ripple factor and wave forms).
- 12. Study of the effect of adding capacitor filter to F.W.R. (Waveforms and Ripple factor calculations).
- 13. Zener diode Regulator circuit.
- 14. Input characteristics of BJT (CE configuration)
- 15. Output characteristics of BJT (CE configuration)
- 16. Verification of Transistor current gains ( $\alpha \& \beta$ ).
- 17. Load line and Q-point of CE Amplifier.
- 18. Study of frequency response of CE amplifier- with and without CE (Emitter bypass cap.)

- 19. PCB designing for given circuit using manual method.
- 20. Circuit construction on the PCB of a given circuit (drilling, components mounting)

& soldering, etc.)

21. PCB designing for a given circuit using CAD tools.

# **GE - 1 Consumer Electronics**

### (Credits: Theory-03, Practicals-01)

#### Theory Lectures: 45

#### Unit -1

### Audio systems:

PA system, Microphone, Amplifier, Loudspeakers. Radio receivers, AM/FM. Audio recording and reproduction, CD and MP3.

#### Unit-2

#### TV and display systems:

Television standards, MP4 players, Set Top box, CATV and Dish TV, LCD, Plasma & LED TV. Projectors: DLP, Home Theatres, Remote Controls

#### Unit-3

#### Landline, Mobile telephony and Cabling:

Basic landline equipment, Cordless. Intercom/ EPABX system. Mobile phones: GPRS & Bluetooth and Wi-Fi. Analysis and Comparison of 1G, 2G, 3G, 4G, 5G and 6G Telecom services, GPS Navigation system. Smart Phones Office Equipment: Scanners, Barcode / Flat bed, Printers, Xerox, Different types of Cables, Punching and crimping of cables.

#### Unit-4

#### **Electronic Gadgets and Domestic Appliances:**

Digital clock, Digital camera, Handicam, Home security system, CCTV. Air conditioners, Refrigerators, Washing Machine/Dish Washer, Microwave oven, Vacuum cleaners

#### **Suggested Books:**

1. R. P. Bali Consumer Electronics Pearson Education (2008)

2. R. G. Gupta Audio and Video systems Tata McGraw Hill (2004)

#### Laboratory experiments under: GE1: Consumer Electronics At least 8 experiments from following list Practical List

- 1. Punching and crimping of cables
- 2. Study of Microphone
- 3. Study of Amplifier
- 4. Study of Loud speaker
- 5. Study of AM Radio receivers
- 6. Study of FM Radio receivers

### (10 Lectures)

#### (10 Lectures)

### (15 Lectures)

(10 Lectures)

- 7. Study of a PA system
- 8. Audio recording, reproduction and rendering of sound signals
- 9. Study of Set top box
- 10. Study of Home theatre system
- 11. Study of a Projector
- 12. Study of a Landline equipment
- 13. Study of a Mobile equipment
- 14. Study of a Digital clock
- 15. Study of a Digital camera
- 16. Study of a Handicap system
- 17. CCTV installations and cabling
- 18. Study of an Air conditioner system
- 19. Study of a Washing machine system
- 20. Study of a Dish washer system
- 21. Study of a Microwave oven system
- 22. Study of a Vacuum cleaner system

#### GE 2: REPAIR AND MAINTENANCE OF ELECTRICAL AND ELECTRONIC APPLIANCES/Medical Home Instruments (Credits: 03, Practical :01) Total Lectures 45

#### UNIT I INTRODUCTION TO ELECTRICITY

Line Voltage: -Distribution, Mains supply standards, Meaning of Single phase and three phase supply, conventions followed. Importance of earthing and fuse: Introduction of Earthing, need of earthing, Hazard, Types of earthing, Advantage of earthing, working of earthing, Importance of fuse, types of fuse. HOUSE WIRING: Introduction of Wiring, types of wiring, advantage of wiring, wiring methods, electrical panel, House wiring diagram.

#### UNIT II

#### **Energy Consumption and Preventive Maintenance**

General Precautions, handling and maintenance for all types of electrical and electronic domestic Appliances, Energy consumption. Energy meter: Introduction, working, Connection and Energy meter reading: Power Calculation of Load, Electricity Bill calculation

#### UNIT III

#### **HEATING APPLIANCES:**

Electrical iron, Electric stove, Electric Toaster, Immersion heater, Electric geyser, Electric Oven, Induction Cooktop, Electric Roti Maker, Electric Kettle, Ordinary and automatic iron:-Introduction, working principle, construction, operation, Installation, Maintenance and Repair (fault-finding and removal of faulty component)

#### **UNIT IV**

(7L)

### (12L)

(7L)

(5L)

#### **MOTORIZED APPLIANCES:**

Electric fan (Ceiling Fan and Table Fan), Electric Mixer grinder, juicer, Electric washing machine, Hairdryer, Vacuum cleaner:-Introduction, working principle, construction, operation, Installation, Maintenance and Repair (fault-finding and removal of faulty component)

#### UNIT V

#### Electrical and electronic appliances

Electric gas lighter, Electric bell and buzzer, Emergency light, Voltage Stabilizer (Relay based), Linear Regulated Power Supply, Battery Charger, Solar Voltaic cell, Tube light: Introduction, working principle, construction, operation, Installation, Maintenance and Repair (fault-finding and removal of faulty component)

### UNIT VI

### Visual electronic appliances

Introduction, block diagram, working principal and different sections of Public address system, CD/DVD player, LCD/LED Television

# LAB GE2: Repair and Maintenance of Electrical and Electronic Appliances: (any 8)

- 1. Use of tong tester, tester, Multimeter for measurement of Voltage, Current, Resistance and Continuity test.
- 2. Dismantling and reassembling of ordinary/automatic iron, Testing and repair of ordinary/automatic iron
- 3. Dismantling and reassembling of electric stove and hot plate, Testing and repair of electric stove and hot plate
- 4. Dismantling and reassembling of Induction cooktop, Testing and repair of Induction cooktop
- 5. Dismantling and reassembling of Electric Kettle, Testing and repair of Electric Kettle
- 6. Construction of Electric Extension board, Testing and repair of extension board
- 7. Dismantling and reassembling of electric oven, Testing and repair of electric oven
- 8. Dismantling and reassembling of electric toaster, Testing and repair of electric toaster.
- 9. Dismantling, assembling and testing of immersion heater and installation of geyser.
- 10. Testing, fault-finding, repair and overhauling of electric fan
- 11. Testing, faultfinding, repair and overhauling of electric mixer
- 12. Testing, faultfinding, repair and overhauling of non-automatic agitator type washing machine
- 13. Testing, faultfinding, repair and overhauling of hair dryer
- 14. Testing, faultfinding, repair and overhauling of vacuum cleaner
- 15. Testing, faultfinding, repair and overhauling of grain grinder

(7L)

(7L)

- 16. Dismantling, assembling, testing and repair of electric gas lighter
- 17. Testing, faultfinding and repairs of electric bell.
- 18. Testing, faultfinding and repair of emergency light.
- 19. Testing, faultfinding and repair of stabilizer.
- 20. Dismantling, assembling and study of various sections of LCD/LED TV
- 21. Dismantling, assembling and repair of battery charger / adaptor
- 22. To measure voltages/signals at various test points of public address system.
- 23. To study installation of DTH.
- 24. Tube light wiring
- 25. Installation and Testing of Ear thing.
- 26. Installation of Basic Single phase wiring as per the given wiring diagram.

#### **Reference Books**

1. The Repair & Maintenance of Electrical Equipment: A Complete Guide to Troubleshooting Portable Electric Tools and Generators. Front Cover. Fred Sotcher.

2. Troubleshooting Electronic Equipment: Includes Repair And Maintenance, R.S. Khandpur, Second Edition

### **GE2: Medical Home instrumentation**

#### (Credits: 03, Practical :01) Total Lectures 45

#### **Fundamentals of Medical Instrumentation:**

Anatomy and Physiology, Physiology system of body: Cardiovascular System, Respiratory System, Nervous system, Sources of biomedical signals, Basic medical Instrumentation system, General constraints in design of medical instrumentation system.

#### **Bioelectric Signals and electrodes:**

Origin of Bio Electric Signals: Electrocardiogram, Electroencephalogram, and electromyogram, Recording Electrodes: Electrode tissue interface, Skin contact impedance, Silver - Silver Chloride electrodes, Electrodes for ECG, Electrodes for EEG, Electrodes for EMG, Electrical conductivity of electrodes jellies and creams, Microelectrodes: Glass micro capillary electrodes, Metal Microelectrodes.

#### **Physiological transducers:**

Introduction, Classification of Transducers, performance characteristics of Transducers: static and dynamic characteristics, signals from cardiovascular system, signals from respiratory system and the various types of transducers required to measure a given parameter, Optical fibre sensors: types of optical fibre sensors, **Biosensors**, Smart sensors

#### **Recording Systems:**

(2L)

#### (12L)

# (8L)

# (7L)

(5L)

### **Biomedical Recorders:**

Working principles of Electrocardiograph (ECG), ECG leads Electroencephalograph (EEG) and Electromyography (EMG) (qualitative study only). Phonocardiograph: origin of heart sounds, Microphones for Phonocardiography.

### Patient Monitoring Systems:

(6L) Measurement of heart rate, Measurement of pulse rate, Blood pressure measurement: In-direct Methods of blood Pressure measurement: automatic blood pressure measuring using Korotkoff's method. Measurement of respiration rate: thermistor method, Pulse oximeter, Working principle of cardiac pacemaker.

### Non- Invasive Diagnostic Imaging:

(5L) Working principles of X-rays, CT scan, Magnetic Resonance Imaging and Ultra-Sound Imaging.

1. Handbook of Biomedical Instrumentation By R.S. Khandpur, TMH, 2nd Edn

2. Medical Instrumentation- Application & Design, By John Webster, 3rd Edition, Wiley India Edi.

3. Biomedical Instrumentation and Measurements by Leslie Cromwell, Fred J. Weibell, Erich A. Pfeiffer PHI (2nd Edition)

- 4. Principles of applied biomedical instrumentation by Goddes& Baker, Jonh Wiley
- 5. Medical Electronics and Instrumentation by Sanjay Guha, University publication.
- 6. Textbook of Medical Instruments, By S. Ananthi New Age International.

### Practical's: (At least 8 Experiments)

- 1. Study of Bio-Medical ECG.
- 2. Study of Bio-Medical EEG.
- 3. Study of Bio-Medical EMG.
- 4. Study of Bio-Medical Electronics Pressure meter.
- 5. Study of Bio-Medical Glucometer.
- 6. Study of Bio-Medical transducers for bio-medical applications.
- 7. Study of Oximeter.
- 8. Bio-Medical application using transducer I.
- 9. Bio-Medical application using transducer II.
- 10.Study of Bio- Medical transducers
- 11. Study of Bio- Medical transducers
- 12. Study of electrical conductivity of electrodes and jellies / creams
- 13. Study of Pulse Rate
- 14. Study of Heart beat Meter.
- 15. Study of cardiac pacemaker
- 16. Study of ultrasonography
- 17. Study of oximeter
- 18. Measurement of Body temperature
